

# Implant Post-Operative Care Instructions

## DO'S & DONT'S AFTER YOUR IMPLANT PROCEDURE

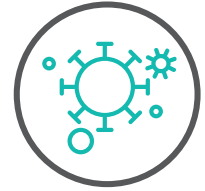

Maintain firm pressure on area with gauze for at least 30 minutes

Take prescribed antibiotic or painkillers as directed on the box

Call the clinic in case of excessive bleeding

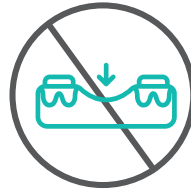

Advise your dentist if you have any medication allergies

Apply an ice pack to reduce any swelling to the facial area

Avoid brushing your teeth surrounding the treated area for 24 hours

Do not touch or poke the sutures in your mouth or stretch your lip to inspect the area

Do not rinse or spit for a minimum of 24 hours

Avoid excess physical activity and exercise for 24 hours

Avoid chewing on the area where the implant has been placed

Do not smoke or vape – smoking increases the risk of implant failure

Do not drink through a straw, drink alcohol, or drink carbonated liquids for 24 hours

If you have any questions regarding your treatment or would like to discuss the implant process further, please contact our friendly team.
